

We partner with energy service companies, facility management companies and other organisations who use and resell our dashboard to their own customer base. We also work with technology companies to build leading-edge solutions in various application domains.

We understand that rebranding is key to maintain a relation of trust by presenting a dashboard, report and other tools unified with your services and products, and to avoid confusion by introducing a new partner to the customer.

For this reason we allow energy and OEM partners to rebrand our dashboard and embed it within their own system. We offer branding on shared marketing collateral too, with your logo and corporate colours.

Some branding examples

Dashboard Branding

Report Branding

SOFTWARE

Wattics pioneers Sentinel, a self-learning analytics engine that offers a great new experience to energy management, diagnosing power use so as to alert you with clear and efficient energy saving actions, as soon as a machine or set of appliances are experiencing energy inefficiency.

Energy data (through Metering solutions) → **Sentinel** (Keeps watch for you) → **Insightful information**

Insightful information is distributed via:

- Messenger apps:** Smartphone Alerts, Dashboard Notifications
- Consultancy services:** CMVP Experts, ESCOs

You can choose to receive Sentinel notifications on our Messenger Dashboard, to your email or mobile phone depending on urgency and preferred settings. Specific notifications can also be set up by the energy professionals or the end user.
