

What are the installation steps when using the Wattics Octopus Gateway

The procedure to follow when installing the Octopus Gateway unit involves 6 steps:

1. You install the Wattics Octopus Gateway unit and connect your meters and sensors to the available inputs (RS485, TCP, analog/digital inputs)
2. You configure data collection from the meters and sensors using the Wattics Octopus configuration tool
3. You fill in the Octopus Installation Report
[Download Wattics Octopus Installation Report](#)
4. You send the report to Wattics
[Click here to submit your report to Wattics](#)
5. Wattics sets up your online Dashboard
6. You receive automated emails from Wattics to access your dashboard when your setup is ready
